

Online on Function and String - Section B

Duration: 40 minutes

Marks: 10

Task

Write a function called `int isRotation(char str1[], char str2[])` to check if one string is a rotation of another. The function should return `1` if the second string is a rotation of the first string and `0` otherwise.

Finally, write a `main` function to:

- Take two string inputs from the user.
- Call the `isRotation` function.
- Print the result as **"Yes"** if the strings are rotations of each other and **"No"** if they are not.

Note:

- You **may use library functions** as needed to achieve the task.

Example

Input:

waterbottle
erbottlewat

Output:

Yes
